Core competencies (our strengths)

In a network/computer society, we are active as a total support company in order to support IT systems on all fronts, from consulting to design, installation, construction, operation, maintenance, and sales, making use of our three core competencies; deployment, technology, and knowledge management.

Concept of IT health care

We look at computers with a new angle and consider them as a living thing. Accordingly, we have developed a unique concept of solution called "IT Health Care" which suggests the idea of maintaining and managing the health of computer systems. Under this concept, we provide customers with more evolved and systematic Fielding solutions, in the form of total care services covering from the birth of systems to trouble prevention and cure, and extending to their prognosis.

* Customer engineer : An engineer that supports the customers' use of their IT system. We have around 4,500 customer engineers throughout Japan, and they provide a range of support services.
