

NEC Fielding's Business Fields

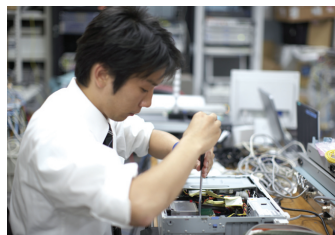

Proactive maintenance business

Without IT systems, we cannot maintain lifelines and social functions in this modern world. We support the stable operation of customer systems by guaranteeing swift repair and recovery in the event of trouble and providing preventive maintenance to preclude such occurrences.

Maintenance services

In addition to preventing problems so that customer's systems can operate smoothly 24 hours a day and 365 days a year, we rapidly restore systems on occurrence of the problem and support the quick re-launch of customer's business to provide a stable system environment.

Fielding solutions business

For stable operation of customer systems on a continuous basis under constantly changing circumstances, we provide various services to solve customer problems. These include assistance with the construction of systems tailored to the customer's business from the stage of system proposal to installation and extension, provision of computer-related products, and proxy performance of time-consuming system operation work.

System deployment services

We install and construct computers, networks, and various type of equipment using our technical abilities backed by advanced know-how and abundant actual experiences through nationwide development. We provide networks that meet customer needs from construction to operational monitoring and diagnosis so that customers can realize both high speeds and reduced cost.

IT management services

To meet various needs of our customers related to system operation, we construct and run operation systems that make it possible to flexibly respond to changes by providing the integrated management of services. There is also a service for 24-hour-a-day, 365-day-a-year remote monitoring of the customer's IT system. In addition, there is a strong demand for our operation agent services where we operate and manage systems that customers find laborious in place of the customer.

Supply services

Through these services, we provide high quality computer-related products, office automation equipment, and software that support the operation of customer's systems. In addition to meeting the demand for ecological products and green procurement* by a growing number of companies that are aggressively promoting environment-friendly activities, we operate an online shopping site "e-lding," where it is possible to view products and receive estimates 24 hours a day, so customers can easily use the service.

* Green procurement : A preferential selection of items with less environmental burden when procuring raw materials and parts for products or materials and services necessary to conduct business from suppliers, such as parts manufacturers, which also encourages suppliers to develop products with less of an environmental burden.
